

What is claimed is:

1. A device with a power tool case (10) – that includes at least one receiving area (12) for a power tool (16) – and a charger (14),
wherein
the charger (14) and the power tool case (10) are designed to remain connected during a charging procedure.
2. The device as recited in Claim 1,
wherein
the power tool case (10) includes installation space (24) for the charger (14), and the charger (14) is designed to remain in the installation space (24) of the power tool case (10) during the charging procedure.
3. The device as recited in Claim 1 or 2,
wherein
the connection between the charger (14) and the power tool case (10) is designed to be detachable.
4. The device as recited in Claim 3,
wherein
the charger (14) is connected with the power tool case (10) via at least one detachable fastening means (18).
5. The device as recited in Claim 4,
wherein
the fastening means (18) is designed to be actuated without the use of tools.
6. The device as recited in one of the preceding Claims,
wherein
the charger (14) includes a wind-up device (20) for a power cord (22).
7. A charger (14) for a device as recited in one of the preceding Claims.
8. The charger (14) as recited in Claim 7, characterized by the fact that it is

designed as a stand for the power tool (16).

9. The charger (14) as recited in Claim 8, characterized by a receiving area (26) in which the power tool (16) is capable of being positioned at least substantially in the machining direction (28).

10. The charger (14) as recited in Claim 8 or 9, characterized by a coupling unit (30) that is designed to correspond with a coupling unit (32) of a power tool unit (16) while the stand function is being performed and to at least transmit charging energy.

11. A power tool case (10) for a device as recited in one of the Claims 1 through 6.
